## OCTOBER 2005 WEBCAST METRICS RATINGS

Denver, CO – November 22, 2005 – Ando Media has released its monthly Internet Radio Top 20, a listing of the top-performing Internet radio stations and networks measured by the Webcast Metrics™ audience measurement platform. October changes of significance include Digitally Imported Radio (di.fm) which registered a 20% gain from September listeners and WBLS which registered a 35% gain from September listeners.

Webcast Metrics uses a proprietary platform to track exact data and convert it to standard broadcast audience metrics that can be easily understood by the broadcast and advertising industry. Comparable statistics for broadcast stations have had to use estimates based on small sample size. With Webcast Metrics, media companies can expect precise measurement and delivery of ad campaigns.

**AQH**: The average number of persons who listened to a station for a minimum of five minutes within a reported day part. This number is the average of the number of listeners recorded every fifteen minutes for each station monitored by the Webcast Metrics heartbeat, or it is the number derived from the total time spent listening data obtained by Webcast Metrics directly from station server log data.

**CUME**: The number of unique persons (defined as the number of different IP addresses) who listened to a station for a minimum of five minutes within a reported time period. This is an unduplicated estimate, which may be an underestimate in cases where more than one listener accesses an Internet radio station via the same IP address.

† These stations represent multiple channels of programming and CUME for those channels is the number of unique listeners unduplicated

<sup>†</sup> These stations represent multiple channels of programming and CUME for those channels is the number of unique listeners unduplicated across all the channels reported.

<sup>∞</sup> These stations are part of the Net Radio Sales Network
